

NETWORK ANALYZER 5530 NA-C R18

Sektor za fiksnu pristupnu mrežu

April 2019

Network analyzer

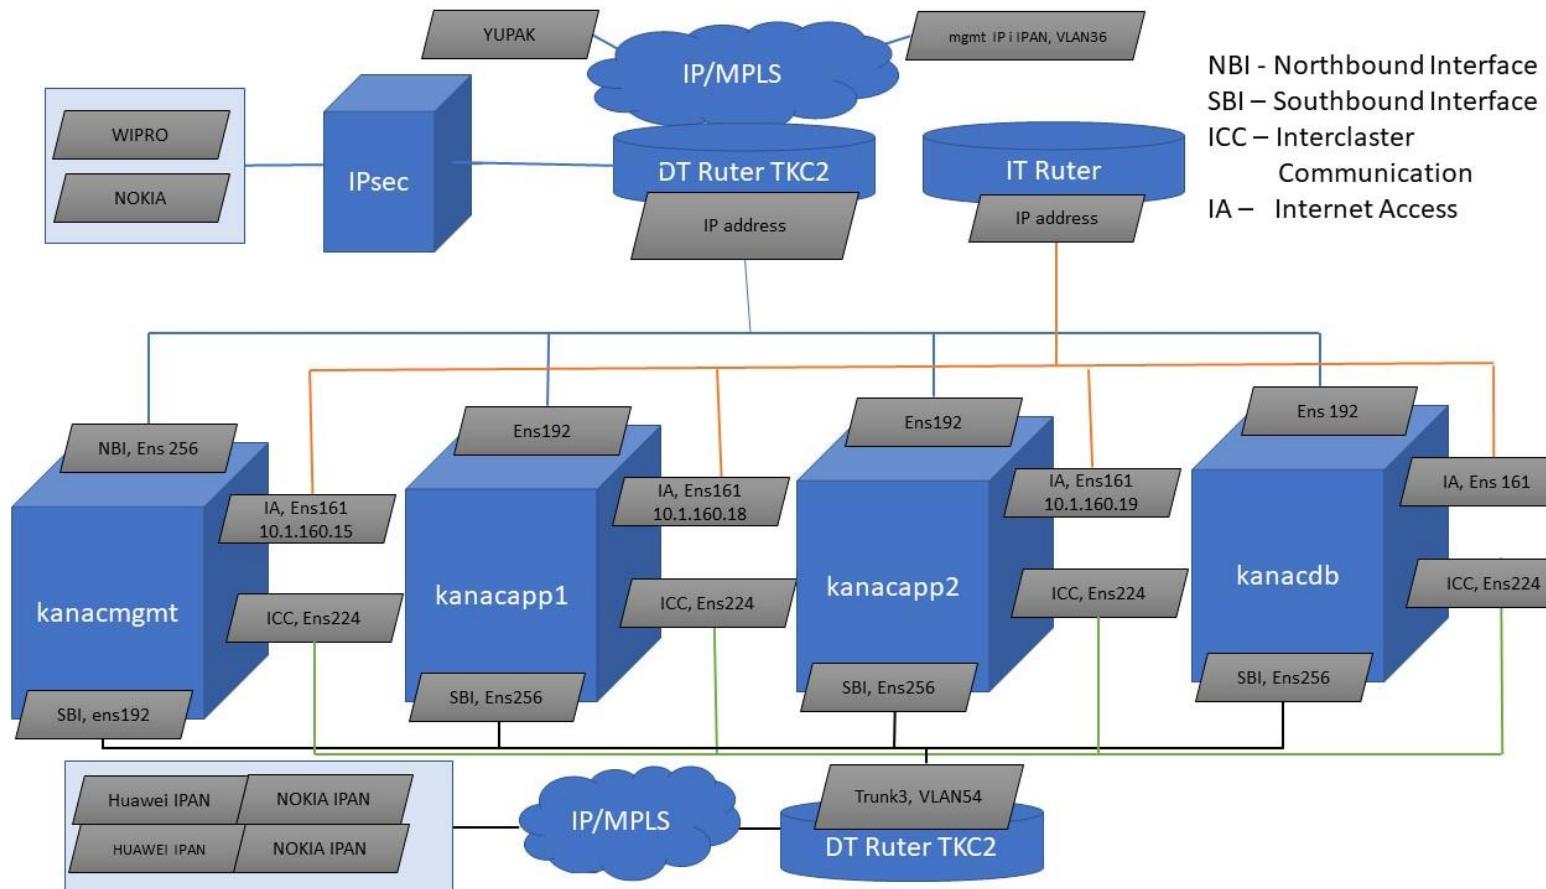

- *Network analyzer* je softverska aplikacija razvijena iz potrebe za alatom koji će omogućiti prikupljanje podataka, analizu mreže, rešavanje problema i optimizaciju DSL linija.
- Funkcionalnosti (moduli) NA:
 - **Network assessment** – na osnovu nadgledanja svih DSL linija u mreži i prikupljanje statistika daje procenu kvaliteta mreže
 - **Dynamic line management (DLM)** – vrši automatsko optimizovanje linije u slučaju degradacije kvaliteta promenom linijskog profila
 - **Line diagnosis** – detektuje i rešava probleme vezane za degradaciju performansi i stabilnosti
 - **Single-end line testing (SELT)** - detektuje i lokalizuje probleme vezane za konektivnost
 - **Upgrade predictor**

Interfejsi:

- **Northbound interface** – integracija sa OSS putem web servera i file transfera, pristup NA
- **Southbound interface** - integracija sa pristupnom opremom
- **Multivendor Plug-in (MVP) interface** - rad na uređajima drugog vendor-a

Realizacija NA u mreži TS

- Virtuelna infrastruktura

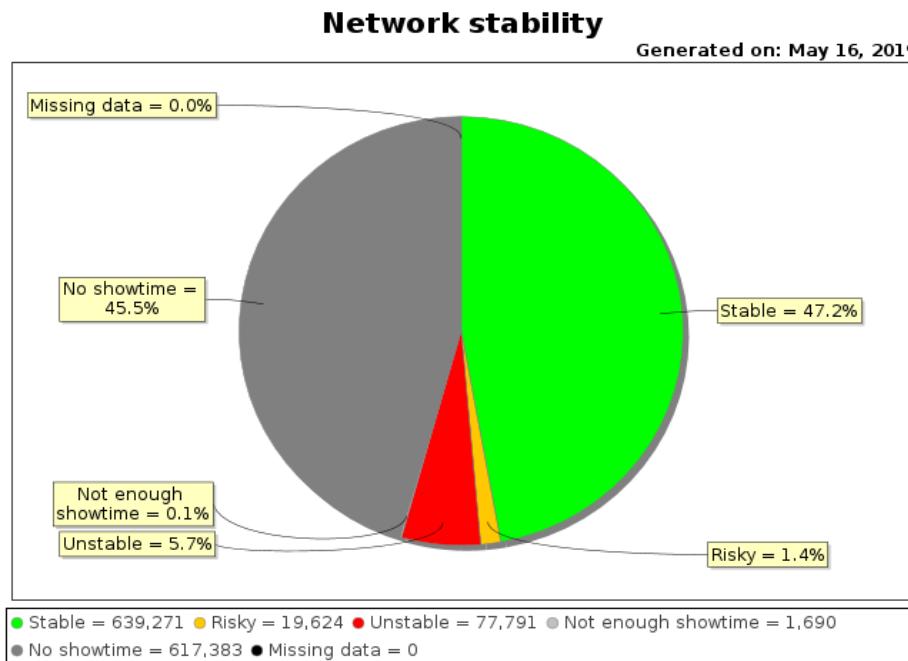

Procena kvaliteta linije

Kolektori: prikupljaju podatke s linije u periodima od 15 minuta i 24 časa

Kriterijum za kvalitet: stabilnost linije

- Na dnevnom nivou:
 - MTBE:
 - Video (DS) – stabilno 180 s, nestabilno 170 s;
 - Data (DS) - stabilno 6 s, nestabilno 2 s.
 - MTBR:
 - Video – stabilno 12 h, nestabilno 6 h;
 - Data (DS) – stabilno 6h, nestabilno 3 h.
- Na nedeljnom nivou:
 - Računa srednju vrednost parametara na dnevnom nivou za period od sedam dana.
- Za dati period: uprosečena vrednost za max 12 nedelja

Network assesment

- Network analyzer daje prikaz stabilnosti mreže na osnovu prikupljenih podataka na dnevnom nivou.

LSD (Line State Diagnosis)

- Koristi se za rešavanje problema konektivnosti i degradacije performansi (na osnovu podataka u trenutku izvršenja).
- Daje statičku sliku ponašanja linije na osnovu istorijskih podataka i trenutnog ponašanja.
- Pokreće se unošenjem ID porta:

B-KOSANCICEV_VENAC-ISV-1:1-1-6-14

B-REPISTE-MA-1:1-0-0-20

- Tabovi u LSD se odnose na izabrani port:
 - Summary
 - Diagnosis management
 - SELT management - prikazuje dosadasnje urađene SELT analize
 - Event history – istoriju događaja na portu za koji je rađena inspekcija
 - Configuration – konfiguraciju porta vezano za DLM

Parameter summary

Parameters	Upstream	Downstream
Actual RTX mode	not in use, Forbidden	not in use, Forbidden
Rel. capacity occupation [%]	91	34
Attenuation [dB]	14.8	17
Loop attenuation [dB]	15.3	24
Attenuation per band [dB]	n/a	n/a
Loop attenuation per band [dB]	n/a	n/a
Noise margin [dB]	9.5	32.7
Actual PSD [dBm/Hz]	-38.3	-45.8
Output power [dBm]	12.1	16.6
User traffic [octets]	2,435,789,047	452,340,618
FEC Parameters	Upstream	Downstream
Actual bitrate [kb/s]	1,021	6,144
Attainable bitrate [kb/s]	1,137	24,196

SELT reference not available

LSD (Line State Diagnosis)-Summary

- U polju “Classification history” su prikazani:
 - Service stability i DSL performance u prethodnih x dana (difiktno je 10).
 - Podebljane uspravne linije (broj 1) ukazuju da je došlo do promene profila.
 - Prevlačenjem miša preko grafa za Service stability i DSL performance prikazuje se naziv profila (broj 2).
 - Prevlačenjem miša preko grafa za DLM state prikazuje se njegova vrednost (operations, impaired, waiting for switch) (broj 3).
 - Inspection prikazuje kada su vršene provere linije

LSD (Line State Diagnosis)-Summary

- U odeljku Diagnosis control može se pokrenuti neka od sledećih inspekcija, na istom portu:
 - Dashboard
 - SELT
 - Short diagnosis
 - Diagnosis
 - Validation

LSD (Line State Diagnosis) - Dashboard

Daje izgled DSL-a u realnom vremenu – promene vrednosti parametara ili nove probleme/events. Na osnovu toga se korisnik može uputiti da uradi određenu akciju, pri čemu se odmah vide njene posledice.

LSD (Line State Diagnosis)-Summary

Short diagnosis

- Na zahtev korisnika, prikuplja i analizira DSL port u kraćem vremenskom intervalu (default 1 minut), što je dovoljno da se generišu svi DSL parametri.
- Napomena: ovo je kratak period za pouzdanu diagnozu. Zato, ako se pojavi tabela “Detected problems”, treba je odbaciti i uraditi LQD (Line quality diagnosis) u automatic collection modu.
- Koristi se da se dobije stanje linije u kratkom vremenskom roku

LSD (Line State Diagnosis)-Summary

LSD (Line State Diagnosis)-Summary

LQD (Line Quality Diagnosis)

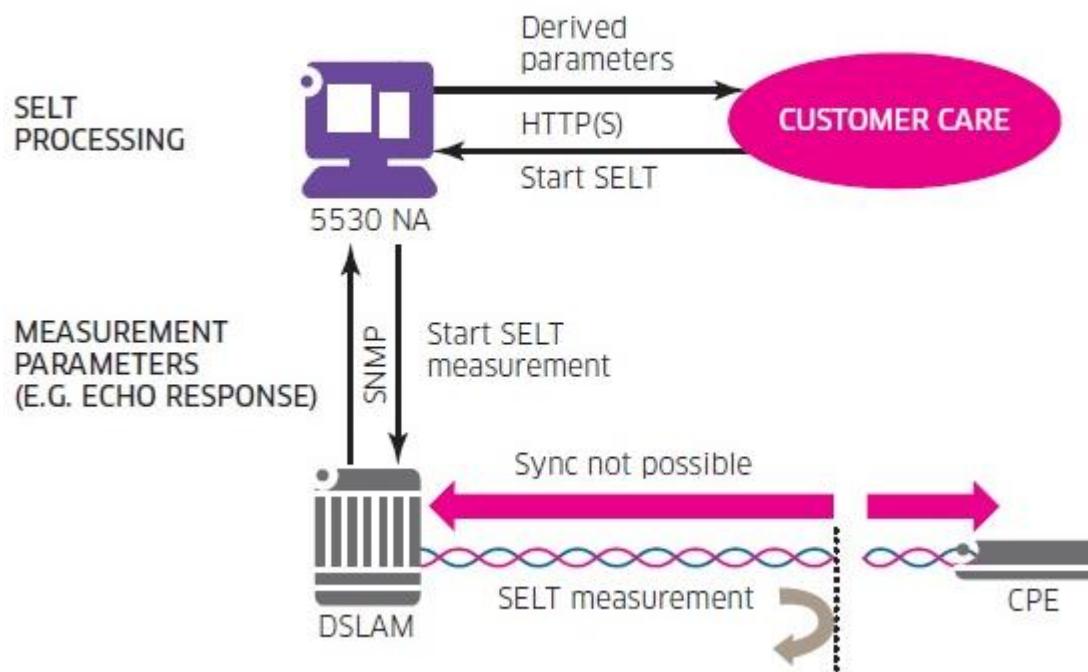

- Služi za rešavanje kompleksnijih problema u kvalitetu servisa. Detektuje nestabilnost, statičke probleme, probleme promenljive u vremenu i fizičke probleme na liniji.
- Moguća su 2 moda inspekcije:
 - Automatska - neophodno 6h showtime (podešeno u sistemskim parametrima)
 - Forsirana - korisnik sistema podešava vreme kolekcije podataka
- NA koristi pragove definisane u pridruženom servisnom templejtu da detektuje degradaciju kvaliteta servisa (stabilnost servisa), a za fizički problem daje analizu DSL parametara.
- Omogućava detaljniju analizu kvaliteta linije (SNR, QLN, Hlog, FEC (down/up), Bitrate (up/down), User traffic, CV, Errored seconds, Severely errored seconds, Noise margin (up/down), LEFTRS, Output power, Attenuation)

LSD (Line State Diagnosis)-Summary SELT (Single-End Line Testing)

- Detektuje i lokalizuje probleme vezane za konektivnost.
- NA zahteva SELT test od DSL uređaja.
- Zahteva prekid servisa ukoliko je aktivan na liniji, i po završetku testa, vrši se restore linije na prethodno stanje
- DSLAM prosleđuje podatke NA-u, gde ih SELT *interpretation unit* dalje analizira.
- Kao izvedeni parametri dobijaju se: kapacitet u up/down, dužina petlje, slabljenje na liniji, termination type i lociranje bridge tap (uklanjanjem bridge tap povećava se kapacitet petlje).

LSD (Line State Diagnosis)-Summary

SELT (Single-End Line Testing)

LSD (Line State Diagnosis)-Summary

SELT (Single-End Line Testing)

SELT analysis result for MA5600T_TEST:1-0-5-15 (analysis launched by admin)

Inspection details

Description	
Reliability	High

Analysis results	Current
	Loop estimate
Measurement timestamp	9/27/13 2:08 PM
Sync status before Selt inspection	Down
Termination type	Unknown
Length	3420 m [+/-] 350 m
Attenuation @ 300 kHz	47.4 dB
Capacity	Capacity not estimated
Bridged tap	Bridged tap detection not enabled
Metallic fault	Metallic fault detection not enabled
Upstream attenuation measured by DELT	n/a
Upstream attenuation estimated by SELT	33.9 dB, default POTS line type used

SELT reflections

Type	Location	Magnitude
Unknown	3420 m [+/-] 350 m	-70.0 dB

Detected problems

Confidence	Impact	Description	Proposed repair actions
100%	No connectivity.	The equipment was administrative down.	Unlock the port.
50%	No connectivity.	There is a loop impairment at 3420.0 m from the DSLAM	Fix the open/short circuit
50%	No impact specified.	No CPE connected or CPE switched off	Verify that the CPE is connected and turned on

LSD (Line State Diagnosis)-Summary Validation

- Pokreće se na liniji da verifikuje da li je prihvatljiva stabilnost pre aktivacije servisa ili da se verifikuje repair action. Vremenski interval se definiše u service template (difiktno 4 sata, a najviše 7 dana).
- Rezultati se vide na stranici diagnosis management u koloni status (ok ili nok)

DLM (dynamic line management)

Konfigurisanje virtuelnih profila:

- virtuelni linijski profili koji su identični linijskim profilima u produkciji
- DLM virtuelni linijski profili koji se povezuju sa service template i linijskim profilima

- Za svaku kombinaciju servisa postoji po jedan Service template
- Sadrži pragove za procenu kvaliteta servisa :
 - min i max rate za DS i US, kašnjenje, PSD (dBm/Hz) itd.

DLM (dynamic line management) Service template

- DLM profili su profili koje NA automatski pridružuje liniji u procesu optimizacije
- Za svaki service template definisana je hijerarhija pridruživanja DLM virtuelnih linijskih profila (redosled promena profila u slučaju narušenih performansi)

Ports management

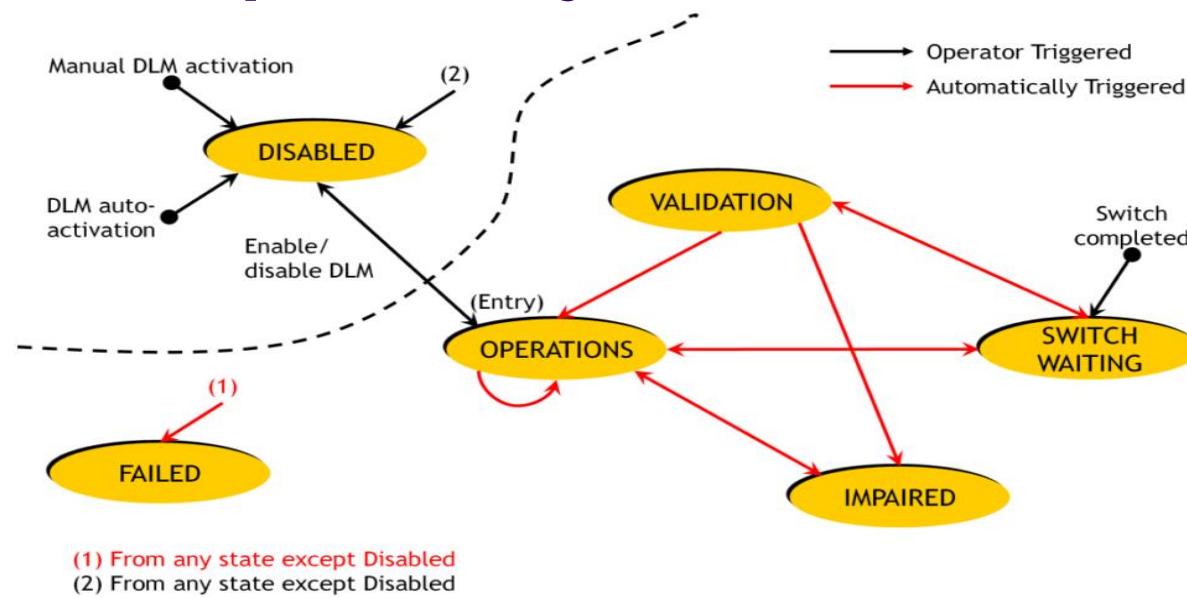

- Daje listu portova sa odgovarajućim DLM stanjem, virtuelnim profilom i *service template*.

DLM (dynamic line management)

Proces optimizacije

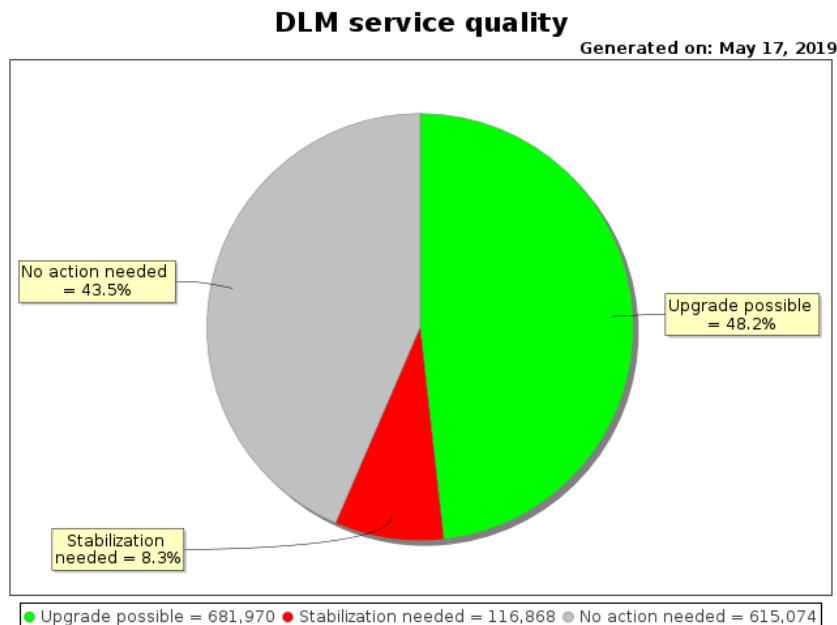

- Automatizovan proces kroz kojim se traži optimalni konfiguracioni profil na liniji, za dati servis, na osnovu izmerenih parametara linije, radi poboljšanja performansi i stabilnosti linije. Obezbeđuje maksimalnu moguću brzinu na liniji uz obezbeđen kvalitet servisa i performansi.
- DLM stanja: Disabled, Operations (Entry), Switch waiting, Validation, Impaired

Ostvaruje se
kroz vezu sa
OSS!

Report management

- DLM service quality za sve linije

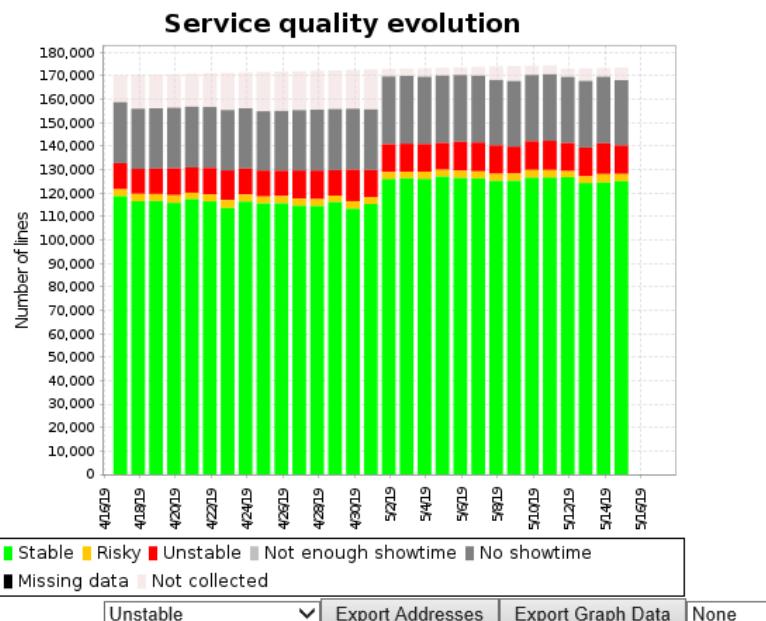

Category	Number	Export
Upgrade possible	681,970	Export
Stabilization needed	116,868	Export
No action needed	615,074	Export

Report management

- Reports for DLM enabled lines

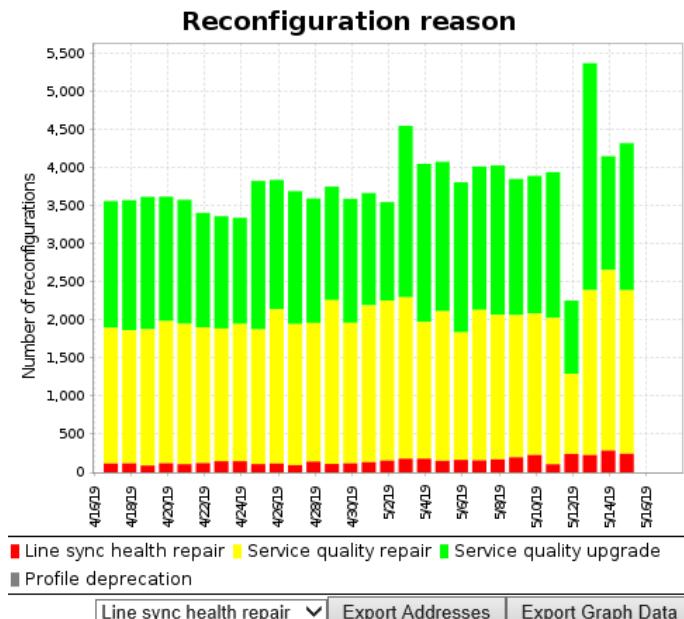

DLM reports generation time: 5/17/19 1:35 AM

- DLM odlučuje o stabilnosti servisa na liniji na osnovu agregiranog kvaliteta servisa u predefinisanom vremenskom intervalu
- Dat je primer izveštaja na nivou svih linija uvučenih pod DLM – na četvrodnevnom nivou.
- Posmatra se stabilnost ukupnog broja linija pod DLM-om.
- Vidljivo je da je 02.05.2019. broj stabilnih linija pod DLM-om povećan sa 120000 na 130000 linija.

Report management

- Reports for DLM enabled lines

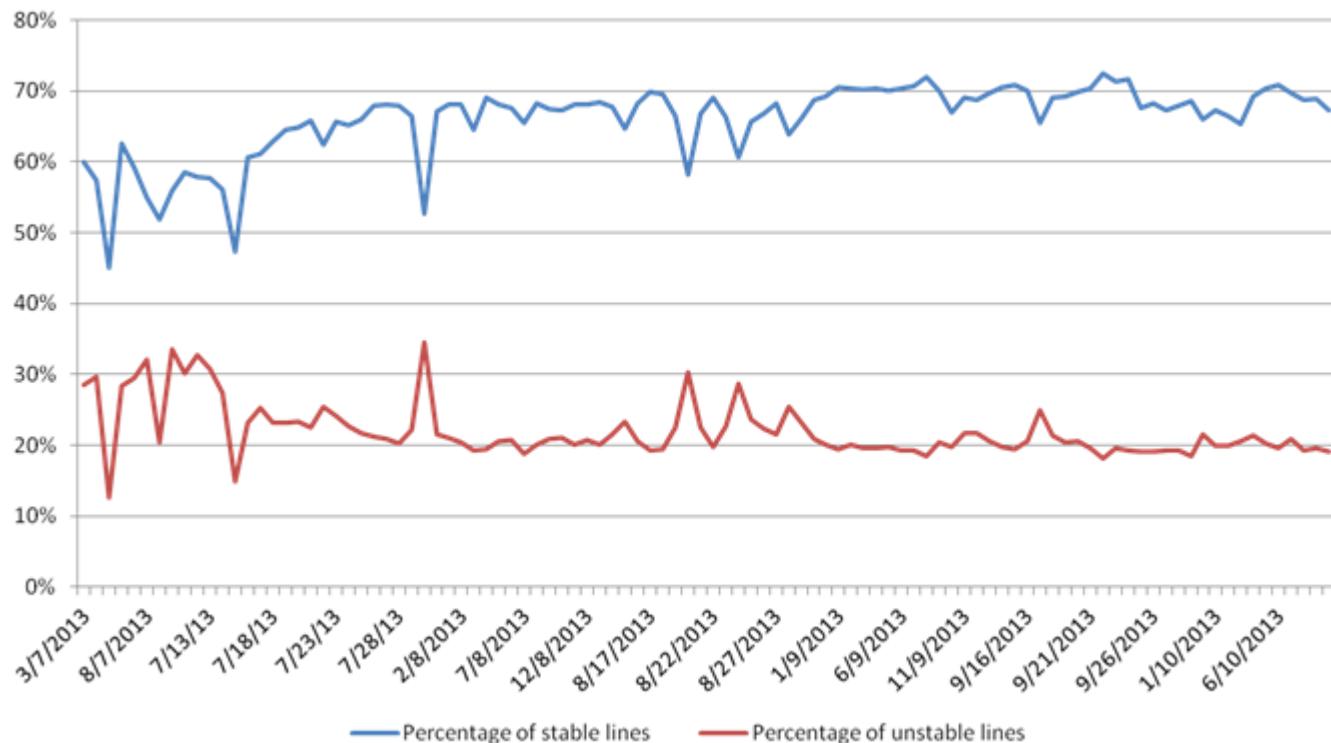

Dijagam označava broj linija za koje je potrebna optimizacija i razloge za optimizaciju:

- Učestali gubici sinhronizacije
- Konstatovana degradacija kvaliteta servisa
- Moguć upgrade kvaliteta servisa u okviru definisanih karakteristika linije
- Nemoguće detektovati uzrok

DLM reports

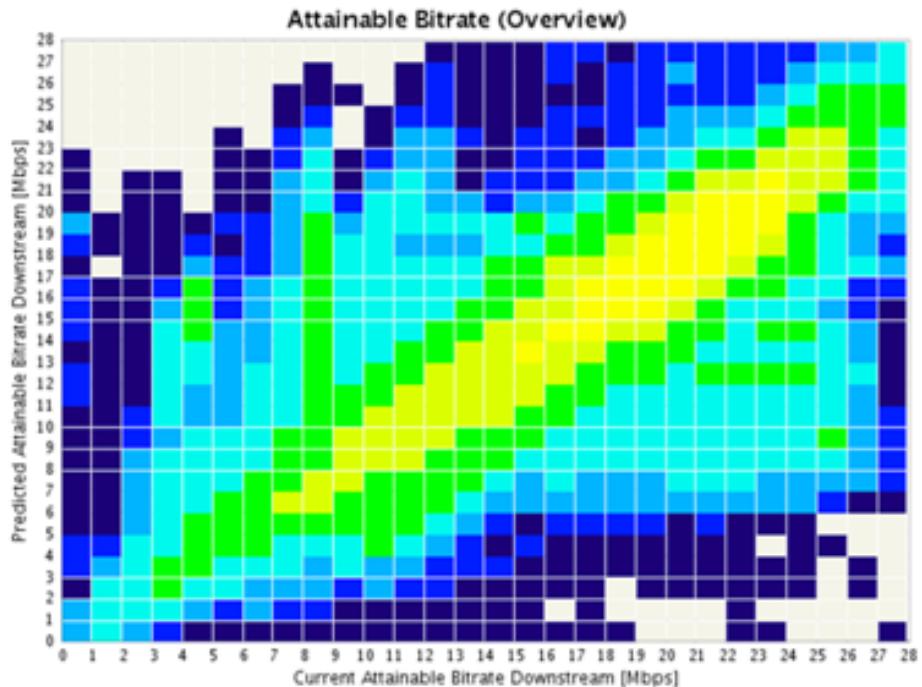

Percentage of lines – daily values

Upgrade predictor

- Upgrade predictor je deo extension platforme.
- Podaci potrebni za predikciju su kolektovani od strane kolektora u Network Analysis modulu na core platformi. Extension platforma prihvata ove podatke, usrednjava ih i smešta u svoju bazu podataka.
- Startovanjem Upgrade prediktora pokreće se algoritam za predikciju koji daje predikciju brzine na liniji.
- Ovi rezultati se prikazuju u okviru line state diagnosis na core platformi.

Upgrade predictor

Svetlijia boja podrazumevaju veći broj linija.

Primer predikcije ADSL2+ brzine na ADSL(2(2+)) linijama.

Predicted bitrate ima prednost u odnosu na attainable bitrate merenu od strane CPE jer vrši merenje za:

- kompletну prenetu snagu signala
- ceo ADSL2+ spektar
- usrednjenu vrednost šuma

- Primena – kvalifikovanje linija za upgrade , ulazni podatak za CRM aplikacije

Upgrade predictor – veza sa TIS-om

- Ostvaruje se preko FTP servera
- U TIS-u su vidljivi sledeći podaci za postojeće BB korisnike:
 - ✓ trenutna DownStream i UpStream BB pristupna brzina
 - ✓ predikcija maksimalne DownStream BB brzine po ADSLu u slučajevima kada korisnik ima/nema IPTV uslugu
 - ✓ predikcija maksimalne DownStream i UpStream BB brzine po VDSLu

Upgrade predictor – veza sa TIS-om

Prediktivne brzine

PREDIKTIVNE BRZINE - NETWORK ANALYZER

Razdelnik:	Vrsta rebra	Broj rebara	Parica
10014 Akademija1	A	147	175

BB Port: B-Akademija-ISV-4.R1.S1.LT11.22
Tip porta: ADSL Port (ADSL2+)

Ostvarive brzine:

ADSL DS HSI:	23199
ADSL DS IPTV:	20621
VDSL DS:	36676
VDSL US:	15385

Trenutne brzine:

DOWNSTREAM:	10239
UPSTREAM:	1021

Izlaz

- Izgled ekrana u TIS-u

Network diagnostics

- Proactive network diagnosis je deo extension platforme.
- Na osnovu prikupljenih dnevnih podataka prikazuje moguće probleme na liniji. Odluka se zasniva na binarnom principu. Ako je proračunata pouzdanost postojanja nekog problema $\geq 60\%$ prijavljuje detektovani problem (ispisuje se i u okviru core platforme - Line state diagnosis), a ako je manja ne prikazuje problem.

Problems summary

	Bridged Tap
	Capacitive Coupling
	Impulse Noise
	Impulse Noise DownStream
	Impulse Noise UpStream
	Intermittent Contact
	Modem Interoperability
	Missing Alarm Splitter
	Non Interop List
	Missing POTS Splitter
	Unbalanced Loop
	Untwisted Wires
	Varying Noise DownStream
	Varying Noise UpStream
	In House Capacitor
	Abnormal Crosstalk
	PSL RFI DS
	PSL RFI US
	Bad Contact in the Middle of the Loop

Configured Binders

Virtual Binders

- Prikupljeni dnevni podaci prolaze kroz određeni algoritam i dobijeni rezultati su input za različite senzore koji detektuju probleme.
 - U desnoj polovini prozora znakom uzvika obeležen je dan i vrsta smetnje za datu liniju u poslednjih deset dana.
 - Accumulated-ispisuje datum uz smetnju koja je postojala za period pre poslednjih deset dana.
 - Na dnu se vide parametri linije.

Jedan način primene NA u održavanju

Zaključak

- *Uz NA5530 ostvaruje se efikasniji nadzor, optimizacija i upravljanje DSL linijama pristupne mreže*
- *Uključivanje NA5530 u procese u okviru definisane arhitekture Telekoma Srbija omogućiće unapređenje CRM aplikacija i bolje korisničko iskustvo*
- *Potreban je dalji rad na implementaciji NA5530 kako bi se efikasno iskoristile sve njegove funkcionalnosti*

Hvala na pažnji!
